REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:

Claims 1-23 recite a semiconductor memory receiving an external address including an array address and a row address and a method of operating a random access memory device including N memory arrays.

The prior art does not teach or suggest the following:

"a redundancy block providing a match signal having an active state when the external address matches one of a plurality of defective addresses, providing a redundant row address when the match signal has the active state, and providing a redirected array address comprising a redundant array address when the match signal has the active state and otherwise comprising the external array address; and

N local row control blocks, each associated with a different one of the N memory arrays, wherein the local row control block associated with the memory array whose array address matches the redirected array address opens a redundant row of memory cells for access based on the redundant row address when the match signal has the active state and otherwise opens a normal row of memory cells for access based on the external row address."

"N local control blocks, each associated with a different one of the N arrays, wherein the local control block associated with the array whose address matches the external array address is configured to provide to the array a series of access signals associated with row operation, wherein the access signals are based on the timing signals, the array address, and the row address."

Therefore, the application is in condition for allowance.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
